Mobile Suction Unit

Intended use:

An assembly of devices designed to evacuate fluid, tissue, gas, or other foreign materials from body cavity or lumen by means of suction. It generally consists of a mains electricity (AC-powered) suction pump, tubing plastic/glass collection container(s), a vacuum gauge, a vacuum control knob, an overflow trap, a moisture filter, and possibly a microbial filter.

NOTE:

- The atmospheric pressure decreases by -0.8cmHg for every 100 meters of sea-level rise, it won't affect the airflow rate. For example, the vacuum level loss by 16.8% at altitude 1524 Meters.
- The surgery mainly lies in the level of airflow rate (LPM), rather than the vacuum pressure.
- The suction tubing & accessories are the applied part that does not touch the patient directly.
- The equipment is not intended for unattended use.

Standards:

- Council Directive 93/42/EEC on Medical devices classified as Class IIa
- EN 60601-1, IEC 60601-1, EN 55011, EN 61000-3-2, EN 61000-3-3
- EN ISO 10079-1:2009/ISO 10079-1:1999
